666/667 Medium Pressure PTFE Hose and Aluminum Compression Crimp Fittings

Eaton's Aeroquip lightweight, low profile aluminum compression crimp fittings are available with Eaton's 666/667 medium pressure PTFE hoses. This hose/fitting combination has been qualified and approved to MIL-DTL-25579C through -16 size. Eaton's medium pressure PTFE hoses are widely used in today's aerospace industry. Hose assemblies with aluminum compression crimp fittings are suitable for temperatures ranging from -65°F to +275°F (-18.3°C to +135°C) with various types of fluids.

The unique combination of the "ramped" nipple and the crimping pattern used on the aluminum compression crimp fitting results in superior fitting retention under pressure. Burst pressure tests indicate that extreme pressures will result in "free hose" bursts rather than fitting blow-off. The fitting design effectively traps and holds the wire reinforcement of the hose in the area of the ramp on the fitting nipple. This assures that it will withstand pressures up to 4 times rated operating pressure.

General Characteristics – Chemical Resistance:

Eaton's Aeroquip PTFE hoses are unaffected by all fuels, oils, alcohols, coolants or solvents commonly used in aircraft. In addition, they are inert to acids both concentrated and diluted and propellants used in missiles.

The PTFE liner has sufficient conductivity to prevent electrostatically induced hose failures.

The tube is capable of conducting a direct current equal to or greater than 10 micro-amps in sizes -4,-6,-8 and 20 micro-amps in size -10 and above with a potential of 1000 volts.

The Eaton method of construction of PTFE hose results in a lower volumetric expansion than any elastomer hose. This assures maximum response efficiency in ballistics ejection systems, and brake systems, where there can be no softness under shock load.

Inherent resiliency and toughness are ensured in the extruded tube by close control of factors affecting crystallinity. Additional structural strength is supplied in PTFE hoses by the tightly braided stainless steel wire reinforcement. The result is a lightweight hose able to withstand prolonged flexing and vibration under all service conditions.

The extruded PTFE tube has a tough, smooth, wax-like texture which resists erosion. No materials of a sticky or viscous nature will stick to its surface.

PTFE hose has essentially zero moisture absorption. This together with its chemical inertness and anti-adhesive characteristics make it ideal for missile fluid systems where noncontamination and cleanliness are essential, and for pneumatic systems when maintenance of low dew point is necessary.

Service and shelf life of Eaton's Aeroquip PTFE hose are unlimited for all practical purposes. However, experience has shown that service life on impulsing applications may eventually be limited by fatigue in the wire re-inforcement. Maximum service life on such applications is best determined by the operator, based on his experience.

Application Data:

Eaton's Aeroquip 666/667 medium pressure PTFE hose may be used for all hydrocarbon fuel systems. The rate of effusion of gases and resistance to capillary leakage of fluid through the hose lines is controlled by a proprietary extrusion method used to produce the PTFE hose liners.

Other Special Applications:

The PTFE hose shown in this bulletin is rated according to the listed specifications. These various ratings are for specific service conditions involving specified temperature, pressure and impulse conditions. In many cases a specific rating can be successfully exceeded if other variables are modified. Thus a higher operating pressure might be allowable if temperature and impulse life are modified or, similarly, operating temperature may be raised if pressure or surge conditions are reduced. Our experienced support staff and test facilities are available.

Eaton's 666/667 medium pressure PTFE hose is also used in hydraulic and pneumatic applications at pressures up to 1500 psi. For hose data, see Page 3.

Hose in accordance with MIL-DTL-27267

Operating Temperatures:

-65°F to +275°F (-53.8°C to +135°C) fluid and ambient with aluminum fittings.

Construction:

PTFE inner tube, stainless steel reinforcement.

666 Hose – Type 300 Series stainless steel wire braid outer cover.

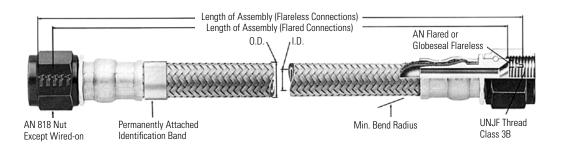

667 Hose – two layers of Type 300 Series stainless steel wire braid.

Identification:

Identification bands show specification number, manufacturers code number, operating pressure and other required information.

Specification:

Eaton's Aeroquip medium pressure assemblies with 666 and 667 PTFE hose and Aluminum Compression Crimp fittings comply with the MIL-DTL-25579 industry standard for 1500 psi, high temperature lines for aircraft and missile fluid systems and for ground support use where temperatures do not exceed +275°F (+135°C).

Aluminum Crimp Fittings

The unique combination of the "ramped" nipple and the crimping pattern used on the aluminum compression crimp fitting results in superior fitting retention under pressure. The fitting design effectively traps and holds the wire reinforcement of the hose in the area of the ramp on the fitting nipple.

Eaton's aluminum compression crimp fittings are available in both flared and flareless types to mate with MS33656 and MS33514 end connections. In addition, elbow fittings are available in standard 45° and 90° styles. Special elbows, crosses, tees, wyes, adapters, bosses, etc. may be made for custom installations.

Matched for Matchless Performance

Eaton's Aeroquip fitting tolerances are engineered to match Eaton's Aeroquip hose tolerances, therefore the use of Eaton's fittings and/ or the use of Eaton's hoses with fittings supplied by other manufacturers, expressly voids any responsibility on the part of Eaton for performance of the complete hose line assembly.

666/667 Hose Data

Also available in Non-Conductive Hose for gaseous and liquid oxidizing systems.

How to Order Hose, Fittings and Assemblies

Basic assembly numbers

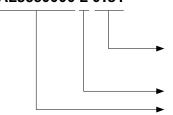

The basic part numbers shown here represent standard configurations with materials, markings, and cleaning requirements conforming to MIL-DTL-25579. If your requirements differ from these standards, the hose assemblies you order will be assigned new numbers by Eaton.

Position angle

On assemblies with an elbow fitting on each end, measure the position angle as shown above and suffix the angle to the basic style number. In all cases, the angle should be expressed in 3 digits. For example, 35° should be written as 035. If the angle desired is 0°, specify 000.

AE3660000 E 0184

Sample part number:

Straight and single elbow assemblies:

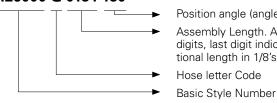

Assembly length. Always four digits; last digit indicates fractional length in 1/8's of an inch.

Hose Letter Code

Basic Style number

Fittings AE21502 H Basic Fitting Number ◀ ► Hose Dash Size -10 -12 -16 Letter Code Н J Κ Μ

AE6000 G 0184 180

Double elbow assemblies:

Position angle (angle of rotation)

Assembly Length. Always four digits, last digit indicates fractional length in 1/8's of an inch.
